

Aquatec Maxcon offers a range of traditional and innovative low and high rate aerobic treatment processes to completely remove residual biological oxygen demand (BOD) from the wastewater source.

These include:

MBBR

Aquatec Maxcon offers Moving Bed Bio-Reactors (MBBR) as treatment for low-rate COD removal.

Circox

The Paques' Circox process utilises unique aerobic granular biomass for treatment of industrial waste including polishing UASB effluent streams. The plants have the smallest possible footprint, offer excellent process stability and deliver very low COD product for further treatment or possible re-use.
