

Potable Water - Suitable or Fit for Drinking

Shouldn't all water be like this? Unfortunately, our fresh water supplies are often characterised by unacceptably high levels of turbidity, colour, taste and odour, as well as harmful bacteria. Our water therefore, must be treated to make it completely safe and pleasant to drink.

Our Objective

Reliable delivery of safe, aesthetically pleasing drinking water to consumers, meeting all specified water quality and quantity standards.

Aquatec Maxcon can provide all technologies required to achieve this objective, as depicted by the following potable water treatment flowsheet.
